Fret and Grille Work for Interior Decoration.

FRET WORK is made by gluing sawed pieces of wood together, forming a distinct pattern. Grille work, by using turned wood in like manner. The work now used so universally and called "Grille" is made by combining different patterns of Fret or Grille work, or by combination of Fret with Grille work.

Very handsome grilles are made by using one pattern of either class of work, but our designs are generally combinations of two or more patterns.

Fret work of any pattern and Grille of any design, when worked together, is figured on basis of the number of square feet of each used.

Customers wishing a combination, Fret and Grille, should send us a rough sketch of the combination desired, and we will send for inspection a design of the same with price.

To enable customers to give estimates on some basis for Fret and Grille combinations, we number each design and quote prices per square foot for same.

Cut-glass Jewels are put into both Fret and Grille work, and add very much to the appearance of the Fret or Grille, making it showy and attractive, especially in window decoration. Work finished in white and gold should always contain Jewels of a size proportionate to the size and design of the Fret or Grille.

Designs shown in this catalogue will convey an idea of the various combinations which may be carried out by using the Fret alone or with Grille, and show at the same time the beautiful effect rooms may receive at the hands of the decorator by the use of some of our Fret and Grille, in addition to the draperies selected.

We have steadily improved our workmanship with improved appliances, and with competent and practical designers, we are able to produce better results than ever, and deliver all work as promptly as is consistent with good workmanship.

We will be pleased to furnish special designs upon application. Prices quoted are for the work made to any desired form or size, in antique or natural oak, cherry or imitation mahogany, finished complete, ready for any drapery-man to put in position.

To figure the number of square feet in Fret and Grille work, multiply the extreme length by the extreme width, regardless of shape.

Goods shipped F. O. B. Buffalo, N. Y., at risk of purchaser after transportation company receipts for same.

Grille work shipped by express, unless otherwise ordered.

Claims for correction or deduction must be made within five days after receipt of goods.

Terms, net 30 days, or 2% for cash in 10 days.

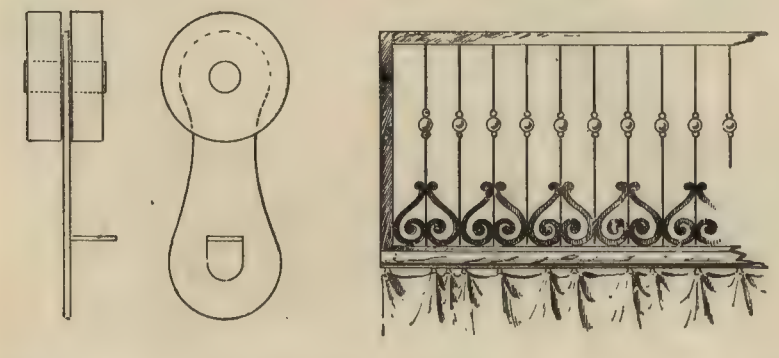
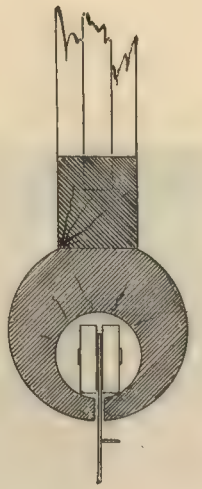
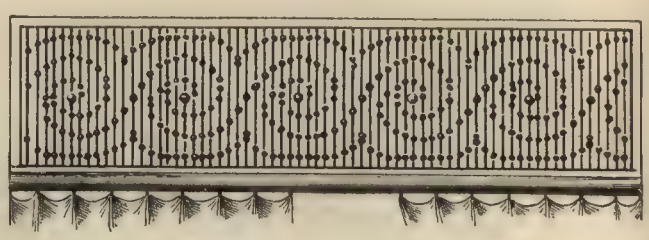
The Fero Combination Curtain-Pole and Grille





The wheels of the carrier being made spherical in shape instead of as shown in the cut, work much easier.

Combination Pole Grille No. 511.



Combination Pole Grille No. 525.

This device is intended to take the place of the ordinary curtain pole and rings—by supporting the curtain on brass carriers running through a hollow pole having a narrow slit at the bottom. The carriers are entirely concealed from view, only a small loop appearing at the bottom of the pole to which the curtain is attached by means of curtain-pins. As the carriers work free, the curtain can be easily drawn to the desired position without the catching incident to the use of curtain rings. The pole can be attached to any grille having the lower edge straight. Pole sold without grille work, if desired.

We carry in stock Combination Pole Grilles, finished Medium Antique Oak, Cherry Mahogany, White, and Gold Bronze.

(All other Combination Pole Grille designs, finishes and woods made special.)

No. 511—12, 15 and 18 inches deep, in lengths of 12 feet.

No. 525—12, 15 and 18 inches deep, in lengths of 12 feet.
